Gary and Donna de Graaf  
with herd manager Mario  
Anaya and his wife and Maria.  
Together they dared to dream  
big, work hard and continue to  
rely on their faith to support  
them along the path...all while  
raising their families with  
support from the Jersey cow.  
They are holding one of the  
herd foundations "Maximum  
Maria" EX-93 with over  
153,410 milk lifetime.

JER-Z-BOYZ RANCH was started in 1995 by Gary & Donna de Graaf and their two sons Dustin and Daniel. Gary's decision to switch from Holsteins to Jerseys on their farm in Pixley, CA, was not a popular decision at that time. However it's proven to be a valuable choice with nearly 5,000 milking Jerseys in the herd today. The ability of these cows to last for multiple lactations has allowed for expansion, as well as selling fresh Jersey replacements throughout the West. The herd has developed a distinct flair for flow with components, fertility, and trouble-free cows with longevity.

Over the years, JER-Z-BOYZ has always kept a portion of the herd identified through programs at US Jersey and in 2017 made the decision to put 100% of the herd on REAP. What began in the world of Black & White, changed over to a sea of brown and soon convinced the de Graaf family that the Jersey cow can provide for her caretakers. The Jersey cow is resilient, efficient and has an unmatched ability to help support this farm's mission statement: "Provide Protein To Feed The World."

CONGRATULATIONS **US**JERSEY ON 150 YEARS!

*We're proud to be part of the Jersey World >>>>*

## OUR FOUNDATIONS

Each of these matrons is having an impact on our herd and more importantly other herds around the globe. Their sons, grandsons and/or great grandsons have all made positive contributions thanks to the AI companies that believed in our genetics enough to secure bulls for their marketing programs.

# THE NEXT GENERATION

Combining the blood of our best cow families provides us with these young cows that are now creating the next generation at JER-Z-BOYZ RANCH. Each has been or will be a part of our IVF program as a way to enhance the quality of future generations.

## THE NEW ADDITIONS

Since 1995, our herd has literally been a closed herd. However, as we study the lessons of great breeding establishments of the past, the need to step out and acquire outside genetic sources, was an important part of their success. These new additions possess the qualities we admire in the Jersey cow and we look forward to blending their genetics with those that have anchored our herd.
